

## WETLAND WINS AND LOSSES

The world's wetlands are disappearing three times faster than forests. **But our conservation community is leading the charge to save them.**

### LOSSES

- Up to 70% of wetlands are gone from southern areas of Canada.
- In the most populated areas of Canada, up to 95% of wetlands have been lost.
- **Canada is still losing up to 80 acres of wetlands per day.**
- 97 of Canada's 551 wetland-reliant wildlife species are at-risk.

### WINS

- + Canada is home to 25% of the planet's remaining wetlands.
- + Leading Canada's wetland conservation effort, DUC has already conserved and influenced more than 55 million wetland acres – roughly 17% of Canada's total known wetlands.
- + We're restoring habitat to make up for lost ground, too – 3.4 million acres worth to date.
- + **Thanks to support from people like you, we beat our 2021 goal for conserved habitat by 48%.**

Canadians have an extraordinary opportunity – and responsibility – to protect these essential ecosystems. **Learn more at [ducks.ca](https://ducks.ca)**
